

back section, parallel to the lower plane of the device and perpendicular to the bisectrix of the angle defined by the sides 8 and 9. The plate 31 is interconnected to a lever 11 which enables it to toggle away from the front section 32 when the user depresses the lever 11 in order to facilitate the insertion of the sheet 3. While the user depresses the lever 11, the plate 31 and the front section 32 form, temporarily, a space corresponding to the space 13 of the device according to Figures 1 to 4. A spring 12 tends to push the back section 1 against the front section 32 with sufficient pressure to force the sheet 3 to hug the shapes of the front and back sections.

REMARKS

The specification has been amended in order to improve the quality and readability of the issued claims. Also, the amendments to the specification have been made to give consistency between the reference numerals in the text and the numerals shown in the Figures.

The proposed amendments do not affect the claims because the claims are not being amended. The amendments were not presented earlier as the need for clarification did not come to the Applicant's attention until after receipt of the Notice of Allowability. No new matter has been added to the specification.

It is respectfully requested that these amendments be entered so that the specification may comport with the formal drawings.

In the event this paper is not considered to be timely filed, the Applicant respectfully petitions for an appropriate extension of time. Any fees for such an
